

The UN Security Council Resolution 1540: An Overview of Extraterritorial Controls Over Non-State WMD Proliferation

By Jennifer M. Gibson and Sarah Shirazyan

February 14, 2012

This is a report from the Nautilus Institute workshop “[Cooperation to Control Non-State Nuclear Proliferation: Extra-Territorial Jurisdiction and UN Resolutions 1540 and 1373](#)” held on April 4th and 5th in Washington DC with the [Stanley Foundation](#) and the [Carnegie Endowment for International Peace](#). This workshop explored the theoretical options and practical pathways to extend states' control over non-state actor nuclear proliferation through the use of extra-territorial jurisdiction and international legal cooperation.

Other papers and presentations from the workshop are available [here](#).

Nautilus invites your contributions to this forum, including any responses to this report.

I. Introduction

Jennifer M. Gibson, J.D. Candidate, and Sarah Shirazyan, J.S.D. Candidate, Stanford Law School, state that “Resolution 1540 has the potential to play an important role in forming universally recognized norms of state behavior with respect to WMDs. To do so, however, states must enact and enforce domestic controls over WMD material, wherever and whenever possible.” The authors. The following study assess the extent to which states have applied their domestic WMD controls extraterritorially by examining national reports and matrices submitted to the 1540 Committee to answer three questions. First, how many and which states apply their laws extraterritorially? Second, of those that do apply their laws extraterritorially, what is the scope of that application, i.e. does it apply to nuclear, biological and/or chemical materials? And, finally, what is the jurisdictional basis for the extraterritorial application?

The views expressed in this report do not necessarily reflect the official policy or position of the Nautilus Institute. Readers should note that Nautilus seeks a diversity of views and opinions on significant topics in order to identify common ground.

II. Report by Jennifer M. Gibson and Sarah Shirazyan

-“The UN Security Council Resolution 1540: An Overview of Extraterritorial Controls Over Non-State WMD Proliferation”

by Jennifer M. Gibson and Sarah Shirazyan

I. INTRODUCTORY NOTE

The proliferation of biological, chemical and nuclear weapons (also known as weapons of mass destruction (WMD [\[1\]](#))) is widely accepted as one of the greatest threats to international peace and collective security. [\[2\]](#) Despite numerous international and domestic efforts to prevent WMD proliferation, states and non-state actors [\[3\]](#) continue to see to develop and acquire the materials and means of delivering such weaponry. The events of 9/11 and subsequent revelations of clandestine networks, such as that of Pakistani Scientist Abdul Qadeer Khan, have highlighted the unprecedented threat terrorist networks pose to both peace and stability and the containment of WMDs. Terrorists “seek to cause mass casualties of unprecedented dangers,” making the need to defend against terrorist use of WMD materials a key concern for global security. [\[4\]](#) As the U.S. noted in its National Security Strategy shortly after 9/11, “the greatest threat our nation faces lies at the crossroads of radicalism and technology.” [\[5\]](#)

In order to respond to the multiple roles non-state actors play in WMD proliferation—as both recipients as well as suppliers—in 2004 the United Nations Security Council passed Resolution 1540 [\[6\]](#) on Non-Proliferation of Weapons of Mass Destruction. [\[7\]](#) Generally speaking, Resolution 1540 imposed a range of binding obligations on all UN Member States to keep their biological, chemical and nuclear weapons and the means of delivering such weapons out of the hands of non-state actors. More specifically, it requires all Member States to adopt domestic controls and enforcement mechanisms over WMD materials and to criminalize possession of such materials, irrespective of where the actor is located. The resolution explicitly notes that all Member States shall:

1. “refrain from providing any form of support to non-state actors that attempt to develop, acquire, manufacture, possess, transport, transfer or use nuclear, chemical or biological weapons and their means of delivery” (paragraph 1);
2. “in accordance with their national procedures ... adopt and enforce appropriate effective laws, which prohibit any non-state actor to manufacture, acquire, possess, transport, transfer or use nuclear, chemical or biological weapons and their means of delivery, in particular for terrorist purposes, as well as attempts to engage in any of the forgoing activities, participate in them as an accomplice, assist or finance them” (paragraph 2);
3. “take and enforce effective measures to establish domestic controls to prevent the proliferation of nuclear, biological and chemical weapons and their means of delivery, including by establishing controls over related materials” by developing security, physical protection and border and export controls (paragraph 3). [\[8\]](#)

In order to monitor the progress of Member States in enacting effective domestic legislative and regulatory controls, Resolution 1540 established an *ad hoc* Committee (1540 Committee) to monitor state compliance. [\[9\]](#) Member States are required to report to the Committee on their progress, and recently, these reports have been transferred into matrices designed by the 1540 Committee. The matrices enable the Committee to break down the reports into identifiable indicators, thus allowing the Committee to more clearly track a country’s progress and identify gaps in a state’s compliance. [\[10\]](#)

Resolution 1540 has the potential to play an important role in forming universally recognized norms of state behavior with respect to WMDs. To do so, however, states must enact and enforce domestic controls over WMD material, wherever and whenever possible. The Nautilus Institute for Security and Sustainability commissioned this study to examine the extent to which states have applied their domestic WMD controls extraterritorially. The study examined national reports and matrices submitted to the 1540 Committee to answer three questions. First, how many and which states apply their laws extraterritorially? [\[11\]](#) Second, of those that do apply their laws extraterritorially, what is the scope of that application, i.e. does it apply to nuclear, biological and/or chemical materials? And, finally, what is the jurisdictional basis for the extraterritorial application?

II. EXTRATERRITORIAL JURISDICTION

Before detailing the principles upon which a state may assert its jurisdiction extraterritorially, it is worth noting that international scholars, in particular the American ones, think of three categories of jurisdiction:

1. Jurisdiction to prescribe (prescriptive/legislative jurisdiction);
2. Jurisdiction to adjudicate (adjudicative jurisdiction); and
3. Jurisdiction to enforce (executive jurisdiction).

Prescriptive jurisdiction is the power of a state to regulate persons or activities. [\[12\]](#) More specifically, it is the power of the state to “make its law applicable to the activities, relations or status of persons or the interests of persons in things” as determined by legislation, administrative rule, executive action or judicial interpretation. [\[13\]](#) In contrast, judicial (adjudicative) jurisdiction is the power of a state agency (not necessarily a court) to adjudicate disputes. Generally speaking, executive jurisdiction relates to the power of one state to perform (execute) acts in the territory of another state.

The analysis and conclusions reflected in this paper focus solely on a state’s *prescriptive jurisdiction* to regulate activities related to WMD proliferation.

International law purports to regulate the capacity of states to exercise prescriptive jurisdiction, and enumerates a set of permissible bases upon which states may assert jurisdiction. Different commentators employ slightly different formulations to describe the different permissible bases of jurisdiction. It is, therefore, important to clarify the various bases of jurisdiction examined in this paper and how those terms are used.

International law generally recognizes five bases upon which a state can assert its national jurisdiction. Those five bases are often referred to as the Harvard Principles: [\[14\]](#)

1. The principle of territoriality;
2. The nationality principle (also known as active personality principle);
3. The passive personality principle;
4. The effects principle; and
5. The principle of universal jurisdiction.

A. Territorial Jurisdiction

The most basic jurisdictional principle under customary international law is territorial jurisdiction, or jurisdiction that is based upon where a crime (or other regulated activity) occurred. [\[15\]](#) Commentators have distinguished between two types of territorial jurisdiction: objective and subjective. Subjective territorial jurisdiction recognizes jurisdiction of a state where the act has been committed, whereas objective territorial jurisdiction acknowledges the jurisdiction of a state where the act was completed or had an effect. For example, under the objective standard, a state may only have jurisdiction over the activities of a bomb-maker if he constructs a bomb that detonates in that country. In contrast, under the subjective standard, a state could have jurisdiction if any portion of the bomb-making occurred on its territory.

Territorial jurisdiction has its roots in the basic concept of state sovereignty. International law generally prohibits states from intervening in the domestic matters of another state, thus states generally possess exclusive power within their territorial boundaries. [\[16\]](#) The ability to exercise prescriptive jurisdiction is seen as an integral part of the state’s sovereignty and is often claimed to be an exclusive power belonging to states.

B. The Nationality Principle

Under international law, a second way states may exercise prescriptive jurisdiction is through the nationality or active personality principle. Under this principle, a state may regulate the conduct of its nationals, irrespective of where the national is located when the crime (or other regulated activity) is committed. While this principle primarily covers the state’s ability to apply its laws to its own *citizens*,

the nationality principle also includes jurisdiction based on the domicile or residence of a suspect. Residence within that state or possession of a passport may serve as a solid basis for invoking national jurisdiction. The nationality principle is understood to be “universally conceded.” [17] Moreover, it is applicable not only to individuals, but also companies that have a seat or are registered in a particular country.

C. The Passive Personality Principle

Where the nationality principle permits a state to regulate the conduct of nationals, the passive personality principle extends jurisdiction when the victim of the crime is a national. [18] It permits a state to regulate conduct or activities that have injured one of its nationals. Under this principle a state might, for example, punish foreign nationals for crimes committed against its own citizens. Within the classic jurisdictional framework, passive personality jurisdiction has been observed to be “asserted in some form by a considerable number of states and contested by others” and is “admittedly auxiliary in character.” [19]

D. The Effects (Protection) Principle

The effects principle (also referred to as protective or security jurisdiction) enables a state to claim jurisdiction over activities that threaten its national security that have been committed outside of its territory, but that have a substantial effect within the territory or against a national interest. Normally, this basis allows a state to assert jurisdiction over offences directed against its security or vital interests, or offences threatening the integrity of governmental functions that are generally recognized as crimes. [20]

E. Universal Jurisdiction.

Universal jurisdiction allows a state to assert its jurisdiction over certain forms of conduct irrespective of where the conduct occurs or the nationality of the actor. Stated simply, universal jurisdiction allows a state to exercise jurisdiction “based solely on the nature of the crime.” [21] The important and controversial element of universal jurisdiction is that it is exercised by states with no nexus to the territory or nationality of the conduct or perpetrator in question. [22] In 2000 the International Law Association in its Final Report on the Exercise of Universal Jurisdiction in Report of Gross Human Rights Offences defined universal jurisdiction as follows: “Under the principle of universal jurisdiction, a state is entitled and even required to bring proceedings in respect of certain serious crimes, [23] irrespective of the location of the crime, and irrespective of the nationality of the victim or the perpetrator.” [24]

In recognition of the tension between universal jurisdiction and state sovereignty, universal jurisdiction is generally reserved for universal norms, such as the prohibition against genocide and crimes against humanity. However, in a post-9/11 world, a growing number of states have included WMD proliferation related activities as one potential objective element (*actus reus*) of the crime of terrorism in their national penal legislations. Moreover, some scholars have argued for the inclusion of terrorism (and terrorist activities) within the limited category of permissible subject areas for universal jurisdiction. Others, however, have argued against its inclusion, noting the lack of consensus on a definition for terrorism and the expansive power universal jurisdiction potentially gives to states. [25]

F. The Problem of Potentially Overlapping Jurisdiction

Although a state may have prescriptive jurisdiction under one of the five recognized bases described above, a question remains as to whether jurisdiction should be exercised by State A rather than State B where both can invoke one or more of the jurisdictional bases to support its claim.

In order to find a balance between competing jurisdictional clauses, international law holds first and foremost that a state’s exercise of jurisdiction must be “reasonable.” In order to determine whether a state’s exercise of jurisdiction is reasonable, Section 403 of the Third Restatement lists a number of factors which must be considered, including:

- a. the activity's link to the territory of the state exercising jurisdiction;
- b. the connections between the regulating state and the person principally responsible for the regulated activity;
- c. the character and importance of the regulation to the regulating state;
- d. the existence of justified expectations which counter against regulation;
- e. the international importance of the regulation in question;
- f. the extent to which regulation is consistent with international tradition;
- g. the extent to which another state may have an interest in regulation; and
- h. the likelihood regulation would cause conflict with another state. [26]

In the event of overlapping jurisdiction, under Section 403(3), each state must assess its claim in light of the factors listed above and the state with the weaker claim *should* defer to the state with the stronger claim. It is unclear whether this Section 403(3) purports to state a binding rule of international law or a non-binding principle of comity.

What weight one should give to each of the above factors, however, is still very much contested. Some commentators (e.g. Bassiouni) suggest a hierarchy among the types of national jurisdiction based upon a state's link (or nexus) to the crime in question. Under this hierarchy, territorial jurisdiction receives the greatest weight, followed by nationality jurisdiction, and finally jurisdiction based on the effects principle. [27] Another approach is to weigh and compare the interests served. For example, under this model, the assertion of jurisdiction for serious crimes can prevail over jurisdictions based on allegations of a lesser crime. [28] Finally, some approach the question using a "first come, first served" approach, which gives priority to the state which first initiated proceedings.

While none of these rules for resolving jurisdictional conflicts are definitive, they are important to keep in mind as a limiting factor for this study. We looked only at whether a state's prescriptive jurisdiction allowed for extraterritorial application of its laws. In a specific situation, the overlapping interests of another may prevent a state from exercising its jurisdiction.

III. RESEARCH METHODOLOGY

There were two phases to this study. During the first phase, the 1540 Matrices of 179 states were examined to determine whether or not a Member State reported extraterritorial application of its relevant laws. As noted earlier, the 1540 Matrices are the primary method used by the 1540 Committee to organize information submitted by Member States about their implementation of the resolution. [29] They are based upon the most recent national reports and official government information. The matrices used in this study were approved by the 1540 Committee in November and December 2010.

According to the official 1540 Committee website, matrices have not been completed for eight countries of potential interest to this study (although some of these states have submitted reports containing information that is not organized in accordance with the matrix format). They are: China (and China Taipei), Croatia, Indonesia, Malaysia, Malta, Philippines, Vatican City, and Vietnam. There are also no matrices for regional arrangements, such as the European Union. The extent of extraterritorial provisions in these states/regions thus could not be examined.

During phase two, 36 states that were identified during phase one as having some type of extraterritorial application were selected for more in-depth research. The 36 chosen were those that seemed to be of the greatest concern or relevance in non-proliferation terms. Below are some of the criteria used to narrow down the list of countries to thirty-six:

1. A country is a powerful state, and is able to impose extraterritoriality as a matter of might as well as legal right.
2. A country is a possible source country of WMD materials and technology, e.g., is a member of the Nuclear Suppliers Group.
3. A country is highly compliant with its 1540 obligations overall, or specifically with respect to its obligation to criminalize non-state proliferation activities.

4. A country poses particular proliferation risks because it is a possible or past WMD proliferator, is part of a cross-border ungoverned space, is a near or actual non-state, or is a country of transit, or a country of potential or actual WMD networked non-state proliferation.

For these thirty-six countries, we examined the national reports and addendums submitted by each, as well as the specific legislation referenced with respect to questions of extraterritorial application. In some instances, additional legislation beyond that mentioned by the state itself, such as a country's penal code, was examined in an attempt to identify the jurisdictional basis for the extraterritorial claim.

IV. BASIC FINDINGS ABOUT EXTRATERRITORIAL APPLICATIONS OF LAW

Only 51 of the 179 countries that have submitted reports indicated they have some type of extraterritorial application of their laws. [30] The 51 Member States are listed in Appendix A. These states did not assert extraterritorial jurisdiction equally to the three different types of weapons—chemical, biological and nuclear. While all but one state indicated that their legislation regarding chemical weapons had some form of extraterritorial application, [31] only 44 applied that same extraterritoriality to biological weapons and only 43 to nuclear. A complete breakdown of the states and when extraterritoriality applied is included in Appendix B.

For the thirty-six states that were examined in-depth, we found that for all of them, at least one basis for the exercise of extraterritorial jurisdiction was the nationality principal. There were, however, differences in how that jurisdiction was defined and the breadth of its reach. Surprisingly, we found that almost half of the states also had provision for extending their jurisdiction extraterritorially under either the effects principle and/or, in certain limited circumstances, under the universal jurisdiction principle. In these instances, however, the exercise of such jurisdiction was tied directly to international treaties and law, for example, the prohibition against genocide. Penal codes were the most oft cited source of legislation for extraterritorial jurisdiction among the 36 states examined.

Each of the categories of jurisdiction is discussed in more detail below.

A. Territorial Jurisdiction

Every country in the first instance listed territoriality as the strongest basis for jurisdiction. In many countries, the territorial provisions addressed temporal concerns, i.e., which “phase” of a criminal transaction occurred on its territory. For example, in Armenia, territorial jurisdiction is exercised based not only upon where the crime has started, but also if it continued and/or finished in the Armenian territory. Belarus, similarly, has a temporal element to how it defines its territorial jurisdiction. If the crime started, continued or finished in Belarus, or if the crime occurred on the territory of Belarus in conspiracy with a person who committed it in a foreign country, then Belarus can exercise its jurisdiction over the person in question. [32]

In every case, the territoriality principle was specifically extended to ships, vessels and airplanes traveling under the flag of the specific state.

B. Nationality

Nationality was cited almost as often as territoriality as a basis for jurisdiction and was the primary mechanism through which states exercised extraterritorial jurisdiction. Within this category, however, there were numerous and varied definitions of what “nationality” meant. The vast majority of states included within nationality, not only citizens, but also those resident in the country, irrespective of whether the crime was committed within the country or somewhere outside. Switzerland is a typical example of this. Article 34 of Switzerland's Federal Act on War Material of 13 December 1996 states that a person involved in “the development, manufacture, brokerage, acquisition, surrender to another, imports, export, transit, stockpiling, or any other form of possession of nuclear, biological or chemical weapons” is liable to up to ten years imprisonment. [33] It goes on to state that: “An act committed abroad is an offence in terms of these provisions irrespective of the law of the place of commission if: (a) it violates international law agreements to which Switzerland is a contracting part and (b) the offender is Swiss or is domiciled in Switzerland.” [34]

In a few cases, states have extended their jurisdiction to cover situations where a person acquires their citizenship after the crime, but before proceedings against them commence. For example, Austria's legislation is applicable when the perpetrator is an Austrian national not only at the time of committing the offense, but also if he acquired the nationality later and still was a national during the trial, or had his domicile or general residence in Austria, or the offense has been committed by a legal entity having its seat in Austria. Like several other states in this study, Austria stipulates that its extraterritorial jurisdiction only applies when the acts in question are punishable by the territorial state as well. Iceland has a particular exception to this general caveat when the violation in question involves sanctions. Under its International Sanctions Implementation Act No. 93 (12 June 2008), Icelandic nationals can be held liable for violations committed abroad, even if the act is not punishable in accordance with the laws of the state where the violation was committed.

Some states specifically mentioned that dual citizenship did not act as a barrier to the state's exercise of its jurisdiction.

The most unique application of the nationality principal in the study was the United States. The primary statutes responsible for regulating the export of commercial and dual use items in the United States—the Arms Export Control Act (AECA) and the Export Administration Act (EAA)—have been interpreted as applying extraterritorially, but not because of some type of broad definition of citizenship. Instead, extraterritorial jurisdiction under these statutes is derived from the U.S. nationality of the item or service exported from the United States. Thus, extraterritorial jurisdiction generally will be triggered when: (1) a foreign person has control of good or technology that originated in the U.S.; (2) the foreign person develops an item which contains parts or components that originated in the U.S.; or (3) the foreign person develops a product using U.S. technology. [35] The EAA also requires foreign persons to comply with re-export restrictions that prohibit the re-export of controlled items to countries for which a license would be required or to countries which are subject to a general prohibition or embargo by the United States. [36] The U.S. has frequently brought enforcement actions against foreign persons found to be in violation of these re-export restrictions. [37]

C. Effects-Based Jurisdiction

Effects-based jurisdiction was the second most cited form of extraterritorial jurisdiction, although less than half of the countries studied included it. Under this rationale, the state's jurisdiction extends to activities outside a state's territory that have a substantial impact on its territory or affect its national security. Unlike the nationality principal, which was often found in a state's penal code, effects-based jurisdiction, when it existed, was almost always tied to a specific piece of legislation that dealt with a limited category of offenses. For example, New Zealand's Terrorism Suppression Act of 2002 states that proceedings may be brought in a New Zealand court for acts that occurred wholly outside New Zealand but were done against a New Zealand citizen, a New Zealand state or government facility (e.g. embassy), or in an attempt to compel the Government of New Zealand to do or abstain from doing an act.

D. Passive Personality

Only 6 states based the exercise of extraterritorial jurisdiction on the nationality of the victim or the crime. These include Albania, Armenia, Australia, Finland, New Zealand and the United Arab Emirates.

E. Universal Jurisdiction

Universal jurisdiction was mentioned by under half of the thirty-six states examined. Of those invoking universal jurisdiction, many included it in their penal codes with language that limited its application to international agreements/treaties that were "binding upon" the country. [38] For example, Article 6 of the Bulgarian Penal Code applies universal jurisdiction if a foreigner has committed a crime "against the peace and mankind." The Penal Code does not specify what these two terms mean, but instead makes a reference to international agreements Bulgaria has signed.

Some states have specific statutes dealing with global terrorism or international crimes, which state that jurisdiction over such acts is universal. For example, Belgium has domestic legislation (passed in 1993 and amended in 1999) that allows Belgian courts to assert jurisdiction over grave breaches of the Geneva Conventions of 1949 and Additional Protocol I and II (violations of International Humanitarian Law), as well as genocide and crimes against humanity. The location at which those offenses took place is irrelevant to the exercise of such jurisdiction. Moreover, the statute grants Belgium the power to try such crimes even in absentia (without the presence of the suspect). New Zealand recently passed legislation granting it similar authority to prosecute international crimes under its International Crimes and International Court Act 2000. In contrast, Singapore has limited its exercise of universal jurisdiction to terrorist bombing offenses. Swedish courts, in contrast, have universal jurisdiction over any terrorist crimes, as noted in the Act on Criminal Responsibility for Terrorist Crimes.

None of the countries surveyed employed universal jurisdiction outside these very limited circumstances.

V. RESEARCH CHALLENGES AND LIMITATIONS

The study relied entirely upon the 1540 Matrices, the 1540 National Reports and the legislation listed therein. As a result, the study is limited by the accuracy of these documents. In a couple of instances, we found the legislation listed in the matrix either out of date or unrelated because it did not include a jurisdictional clause that applied the law extraterritorially. For example, in South Africa neither of the pieces of legislation listed pertained to either the control of WMDs or the exercise of extraterritorial jurisdiction. In cases such as this, we looked to a country's penal code and other legal provisions to see if we could deduce some basis for the extraterritorial claim.

Additionally, specific legislation was sometimes difficult to track down and/or inaccessible due to the lack of an English translation. Because the links provided in the 1540 Committee Legislative Database often did not work, we resorted to Google searches and other databases. Where English versions were not available, Google translate was used.

Finally, the study only looked at domestic sources for the application of laws extraterritorially. It is possible that regional commitments may exist that provide for extraterritorial application.

VI. CONCLUSION

Today, the threat of the use of WMDs by terrorist groups is one of the greatest threats challenging the global international security system. UNSCR 1540 was a collective effort to attempt to address this threat. It differs significantly from the existing non-proliferation multilateral treaty and arms control regimes (e.g. NPT, Chemical Weapons Conventions, etc.), as it reaches all WMD activities and particularly targets the proliferation of WMD to terrorists. If implemented fully, UNSCR 1540 would impose a comprehensive set of obligations upon UN Member States to tackle non-proliferation activities and could potentially promote a culture of compliance in this area.

Amongst many other obligations, UNSCR 1540 calls on UN Member States to enact legislation and take effective measures to prevent non-state actors and terrorist groups from obtaining WMD. This paper attempts to draw conclusions as to what extent states have laws in place to criminalize non-state WMD proliferation activities extraterritorially. The study confirms that jurisdictional assertion continues to be primarily a territorial claim and is directly related to the notion of a state's sovereignty. While states have clearly undertaken efforts to harmonize their legislation with UN Security Council Resolution 1540, it was beyond the scope of this paper to look at the key issue of enforcement of these laws.

The obligatory nature of UNSCR 1540 has raised the questions of its implementation, particularly as to what extent UNSCR 1540 triggered cooperation and actual compliance as opposed to assessing whether states simply have formal legal authorities to carry out their responsibilities under UNSCR 1540. Some scholars have also voiced a concern as to whether or not the Security Council has

become a “world legislator” by passing 1540 Resolution with very broad general obligations and has replaced the conventional international law making process. This in turn opened up new debates about rule of law issues on international level, legitimacy of decision making and deliberative democracy within the UNSC. Those are all valid points and interesting avenues to conduct further research.

Irrespective of any criticism, UNSCR 1540 has considerably promoted and advanced awareness of the interest of international community in maintaining international peace through targeting non-state actor non-proliferation activities. The mere existence of extraterritorial control clauses in the national legal framework of reported countries is a valid indicator of that. However, there are still efforts to be done to create stronger legal cooperation in this field and to ensure that WMD do not reach terrorist hands. UNSC Resolution 1540 can serve as a strong complimentary legal tool to other non-proliferation treaties to tackle illicit proliferation activities. Given the nature of this crime, it is important that states have laws and cooperation mechanism in force to prosecute crimes even beyond their borders in a manner that is consistent with the international law limitations on the exercise of extraterritorial prescriptive jurisdiction.

VII. APPENDICES

Appendix A: Countries That Have Self-Identified as Having Laws That Apply Extraterritorially			
Total List of Member States with ET according to Matrices		36 countries subject to in-depth research	
1. Albania	26. Ireland ¹	• Albania	• Pakistan
2. Argentina	27. Italy	• Argentina	• Romania
3. Armenia	28. Jordan	• Armenia	• Singapore
4. Australia	29. Latvia	• Australia	• South Africa
5. Austria	30. Liechtenstein	• Austria	• Sweden
6. Azerbaijan	31. Lithuania	• Belarus	• Switzerland
7. Belarus	32. Mauritius	• Belgium	• Thailand
8. Belgium	33. Micronesia	• Brazil	• UAE
9. Bosnia and Herzegovina	34. New Zealand	• Bulgaria	• United Kingdom
10. Botswana	35. Norway	• Canada	• USA
11. Brazil	36. Pakistan	• Cuba	
12. Bulgaria	37. Romania	• Czech Republic	
13. Canada	38. Saint Kitts and Nevis	• Denmark	
14. Cuba	39. Singapore	• Estonia	
15. Czech Republic	40. South Africa	• Finland	
16. DRC	41. Sri Lanka	• France	
17. Denmark	42. Sweden	• Germany	
18. Estonia	43. Switzerland	• Hungary	
19. Ethiopia	44. Thailand	• Iceland	
20. Finland	45. FYR Macedonia	• India	
21. France	46. Trinidad and Tobago	• Ireland	
22. Germany	47. Tunisia	• Italy	
23. Hungary	48. UAE	• Latvia	
24. Iceland	49. UK	• Lithuania	
25. India	50. US	• New Zealand	
	51. Vanuatu	• Norway	

¹ Ireland cites its constitution as the source of its extraterritoriality. The extraterritoriality in the constitution, however, extends only to Northern Ireland.

33. [Thailand](#)

1. Albania

Albania submitted its national report to UNSC 1540 Committee on 28 October, 2004.

The Republic of Albania is a party to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT), as well as the Chemical Weapons Convention (CWC), the Biological and Toxin Weapons Convention (BTWC) and the Comprehensive Nuclear Test-Ban Treaty (CTBT). According to the article 122 of the Albanian Constitution, all international conventions and agreements after being ratified by the Albanian Parliament, are part of Albanian domestic legislative system and they prevail over domestic legislation.

Reported relevant domestic legislation includes Albanian Penal Code ((No. 7895, 27 January, 1995), Albanian Constitution (21 October, 1998), Law No. 9092 Implementation of the Convention on the Prohibition of the Development, Production, Stockpiling and Use of Chemical Weapons and on their Destruction (03 July 2003).

One of the key developments further to adoption of UN SC 1540 Resolution is passage of Albanian State Import-Export Control Law in 2007. The law controls activities in strategic goods and sets procedures for state export control over prevention of weapons of mass destruction. Albania is not yet participating in some international regimes of arms control, such as Wassenaar Arrangement, Australia Group, Nuclear Suppliers Group, as well as not party to the Hague Code of

Conduct against Ballistic Missile Proliferation.

2. Argentina

Argentina submitted its first national implementation report to 1540 *Ad hoc* Committee on 26 October, 2004. Further to this, Argentina submitted two additional reports on UNSCR 1540 implementation on 13 December 2005 and 5 July 2007 respectfully.

Argentina has ratified the Treaty on the Non-Proliferation of Nuclear Weapons (NPT) and acceded to NPT in 2005. It is also a State Party to the Convention on the Prohibition of the Development, Production, Stockpiling and Use of Chemical Weapons and on their Destruction (1993) and to the Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on their Destruction (1972) together with Comprehensive Nuclear-Test-Ban Treaty (1996). Argentina is a subscriber state to the Hague Code of Conduct against Ballistic Missile Proliferation (2002).

As far as the regional cooperation is concerned, Argentina is also a state party to the Treaty for the Prohibition of Nuclear Weapons in Latin America (Treaty of Tlatelolco, 1967). Argentina has signed and ratified Vienna Convention on Civil Liability for Nuclear Damage (1966), as well as Convention on Early Notification of Nuclear Accident (1986), Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and Their Disposal (1989), Convention on Nuclear Safety (1989).

Pursuant to Argentinean legal system all international treaties to which Argentina is a member state have the status of the highest law of the land, thus have supremacy over domestic law. Accordingly, Security Council resolution 1540 attains the same status as national legislation in Argentina.

Applicable domestic law includes Argentinean Penal Code (1989). Argentina has enacted Act No. 25,886 on 14 April 2004 to amend article 189 bis on supply of weapons in its Penal Code to supplement the definition of offenses covered by Security Council resolution 1540. In addition to its Penal Code and Constitution, Argentina has extensive domestic regulatory framework on weapons control of mass destruction.

Amongst those Argentina lists Weapons and Explosive Control Act No. 20,429 (1973); National Nuclear Activity Act No. 24,804 (1997); Transport of Hazardous Materials Act No. 24,449 (1999); Decree No. 1035 prohibiting the export of weapons (2001); Decree No. 603 creating the National Commission for the Control of Sensitive Exports and War Material (1992); Convention on Chemical Weapons Act No. 24,534 (1995); Weapons and Explosives Decree No.395 (1975); Ecological, Biological or Organic Production Act No. 25,127 (1999); Ecological, Biological or Organic Production Decree No 97/2001 (2001); Resolution 904/98 (1998) setting up Registry of Chemical Weapons; Transport of Hazardous Materials Act No. 24,449 (1994) and etc.

Major legal instrument governing export-import in Argentina is its Act No. 22,415 (Customs Code, 1981). Act No. 24,059 on domestic security and Act No. 25,520 on national intelligence govern border controls related issues.

As far as post UNSCR legislative measures are concerned, in its third follow up report submitted in 2007 Argentina has transmitted the passage of Act No. 26,247 on Implementation of the Convention on the Prohibition of the Development, Production, Stockpiling and Use of Chemical Weapons and on their Destruction. It fulfils Argentina's obligation to enact national legislation according to Article 7 of the Chemical Weapons Convention.

Furthermore, with regard to import-export control legislation Argentinean Federal Public Revenue Administration issued resolution 1892. The latter adds contents of Chemical Weapons Convention schedules 1 and 2 to the María customs database system. This enables to check imports of such substances. The National Registry of Weapons (RENAR) has been given the authority to check and authorize all imports connected with the substances in schedules 1 and 2.

Argentina is a member to five sensitive export control regimes: the Missile Technology Control Regime (MTCR), the Nuclear Suppliers Group (NSG), the Australia Group (AG), the Wassenaar

Arrangement (WA) and the Zangger Committee (ZAC). In 2005 Argentina joined Proliferation Security Initiative (PSI).

3. Armenia

Armenia submitted its first and only national report to 1540 UNSC *Ad hoc* Committee on November 09, 2004. Additional to its national report, Armenia submitted additional document on measures she has taken to comply with 1540 obligations on 21 December, 2005.

Republic of Armenia is a party to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT), as well as the Chemical Weapons Convention (CWC), and the Biological and Toxin Weapons Convention (BTWC). The Republic of Armenia has ratified the Convention on Physical Protection of Nuclear Materials on June 22, 1993.

Protocol Additional to the Agreement between the Republic Armenia and the International Atomic Energy Agency for the Application of Safeguards in connection with Treaty on the Non-Proliferation of Nuclear Weapon was signed on September 29, 1997 and entered into force from June 28, 2004.

In addition to international instruments, Armenian Parliament adopted new Penal Code in 2003 that covers the necessary aspects of counter proliferation issues. Parliament also passed a law on Export control of dual-use items and technologies and its transit across the territory of the Republic of Armenia on September 24, 2003. Armenian Law on Safe Utilization of Atomic Energy for Peaceful Purposes (March 1, 1999 with supplements as of April 18, 2004) is Armenia's primary national nuclear law.

Within relevant domestic legislation one also finds Armenian Customs Code (adopted in 2001) which regulates import and export of certain goods and their means of transportation. Other applicable law is Law on Combating the Legalization of Proceeds from Crime and Financing of Terrorism, as well as Constitution and a number of governmental decrees.

Armenia is not a member of international export control regimes, such as Missile Technology Control Regime (MTCR), Nuclear Suppliers Group (NSG), Zangger Committee, the Australia Group, and the Wassenaar Arrangement. Armenia is not a major supplier of controlled or military goods, materials and technologies. Armenia is a participant of Proliferation Security Initiative (PSI).

Armenian government has taken a number of legislative actions to accommodate 1540 UNSC resolution obligations. Those involve, amongst others passage of non-proliferation related governmental decrees and amending existing legislation, e.g. amending the Law on Licensing, supplementing Government Decree No. 762 of June 9, 2005 on Approval of licensing procedure and form of license for use of nuclear materials, Government Decree No. 745 of June 9, 2005 on approval of licensing procedure and form of license for storage of nuclear materials, Government Decree N. 346 of March 24, 2005 on approval of licensing procedure and form of license for import to and export from the Republic of Armenia of nuclear materials, Government Decree No. 992 of July 27, 2005 (entered into force on August 18, 2005) on Adopting the Control list of dual use items and technologies and its transit across the territory of the Republic of Armenia.

4. Australia

On 28 October 2004 Australia submitted its first national implementation report to 1540 *Ad hoc* Committee. Further to the first report a supplementary one was submitted on 08 November 2005. Australia has a wide range of legal instruments in place to combat WMD proliferation, including by non state actors. Most of the legislation predated the UNSCR 1540, but the majority has undergone amendments in recent years.

Australia is a state party to Nuclear Non-Proliferation Treaty (NPT), Chemical Weapons Convention (CWC) and Biological Weapons Convention (BWC), the Comprehensive Nuclear-Test-Ban Treaty (CTBT), Convention on Physical Protection of Nuclear Materials (CPPNM), Hague Code of Conduct (HCOC), International Atomic Energy Agency (IAEA), adopted Additional Protocol to its IAEA

Safeguards Agreements, as well as Nuclear Weapon Free Zone Protocols. In September 2005 the Australian Government also became a signatory to the International Convention for the Suppression of Nuclear Terrorism.

Primary national legislative framework covers Weapons of Mass Destruction Act (1995 as amended 2010), Nuclear Non-Proliferation (Safeguards) Act 1997, Chemical Weapons (Prohibition) Act (1994 as amended 2007), Criminal Code Act (1995 as amended in 2002), Crimes Act (1978), National Health Security Act (2007), Crimes (Biological Weapons) Act (1976, as amended in 2008 and 2010), Customs Act (1901) and Gene Technology Act (2000). Amongst those, e.g. Safeguards Act criminalizes possession of nuclear materials or associated item without permit. Criminal Code Act prohibits cross-border firearm trafficking, including disposal and acquisition of a firearm.

In addition to Customs Act (1901) Australia passed new custom control legislation, including Customs Amendment (Strengthening Border Controls) Act (2008) and Customs Amendment (Border Controls and Other Measures) Act (2009). The main legal mechanism controlling the export of items applicable for use in military and for WMD programs is Regulation 13E of the Customs (Prohibited Exports) Regulations.

Australia is a member of Zangger Committee (ZAC), Nuclear Supplier Group (NSG), Australia Group (AG), Missile Technology Control Regime (MTCR), Wassenaar Arrangement (WA) and Proliferation Security Initiative (PSI).

5. Austria

Austria submitted its first national implementation report on 28 October 2004. Following year (05 November 2005) Austria also transmitted its second national implementation report to 1540 *Ad hoc* Committee.

Austria has a wide range of international and domestic legislative measures in place to prevent the proliferation of WMD.

Austria has signed and ratified all relevant international non-proliferation instruments, such as the Treaty on the Non-Proliferation of Nuclear Weapons (NPT), the Comprehensive Nuclear-Test-Ban Treaty (CTBT), the Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on their Destruction (BTWC), the Convention on the Prohibition of the Development, Production, Stockpiling and Use of Chemical Weapons and on Their Destruction (CWC).

Austria has also signed a Safeguards Agreement and an Additional Protocol to it with the International Atomic Energy Agency. The letter came into force for all EU members on 30 April 2004. The Additional Protocol in question is targeted to improve IAEA's capacity to detect undeclared activities in the EU non-nuclear weapon states.

Additionally, Austria is a signatory to the Hague Code of Conduct against the Proliferation of Ballistic Missiles (HCOC).

The key regulatory domestic framework includes the Austrian Penal Code (1974), the Nuclear Non proliferation Act (1987), the Foreign Trade Act (1995, as amended in 2005), the War Material Act (1977) as amended in 2001 [\[41\]](#), Federal Constitutional Act for Non-Nuclear Austria (1999), Genetic Engineering Act (1994), Radiation Protection Act (1969, as amended in 2002), Radiation Protection Ordinance (2004), Foreign Trade Decree (as amended 20 October 2004), Nuclear Non-proliferation Act (1972). The Radiation Protection Act has undergone amendments in 2006 to reflect EU's legislation on radiation protection, installation safety and handling radiation waste.

One of the legislative measures taken by Austria to comply with its 1540 obligations was to replace The Foreign Trade Act of 1995 by Foreign Trade Act of 2005 which entered into force on 1 October 2005. The new legal text regulates development, production, stockpiling, acquisition or retention of biological, chemical and nuclear weapons. Foreign Trade Act together with the War Material Act

imposes controls on exports of weapons. Foreign Trade Act also regulates export of nuclear related dual-use items. On 5 May 2009 EC Regulation No. 428/2009 also set up Community regime for the control of exports, transfer, brokering and transit of dual-use item.

As EU member, Austria also adheres and applies standards set by EU Code of Conduct on Arms Exports and Licensing for exports of weapons to third countries.

As far as multilateral weapons and technology export control regimes are concerned Austria is a member to Zangger Committee (ZAC), Nuclear Suppliers Group (NSG), the Australia Group (AG), Missile Technology Control Regime (MTCR), the Wassenaar Arrangement (WA), and Proliferation Security Initiative (PSI).

6. Belarus

The Republic of Belarus submitted its first national implementation report to 1540 *Ad hoc* Committee on 20 October 2004. On 30 August 2005 Belarus presented its second report to provide additional information and respond questions raised by UNSC 1540 Committee.

Following the breakup of the Soviet Union Belarus was the first country to voluntarily give up possession of its nuclear weapons. Accordingly, Belarus is a state party to the majority of international multilateral treaties and arrangements in the field of international nonproliferation regimes. Belarus is a state party to Nuclear Non-Proliferation Treaty (NPT), Chemical Weapons Convention (CWC), Biological Weapons Convention (BWC), Comprehensive Nuclear-Test-Ban Treaty (CTBT), Strategic Arms Reduction Treaty, Treaty on the Elimination of Medium- and Short-Range Missiles, Safeguards Agreement of the International Atomic Energy Agency, Convention on the Physical Protection of Nuclear Materials, Nuclear Safety Convention and the Hague Code of Conduct against Ballistic Missile Proliferation.

National legal framework includes a number of laws and regulations relating to specific issues raised by UNSCR 1540. The list, inter alia, covers Penal Code No. 225-3 (1999), Customs Code No. 130-Z (1998), Administrative Code 194-3 (2003) and Civil Code No. 218-3 (1998). The Export Controls Act (1998) is the basic legislation regulating export controls. The Act sets out the legal bases and the powers of government agencies and legal and natural persons in within the export controls, as well as the purposes, fundamental principles and concepts of the export-control system and a schedule of controlled items (goods, services).

Other pieces of domestic regulatory regime includes the decree No. 94 on Certain Measures to Regulate Military and Technical Cooperation between the Republic of Belarus and Foreign States (2003), Presidential Decree on licensing of particular aspects of activity No. 17 (2003), Act No. 363-3 on the industrial safety of hazardous production facilities, Decision No 338 of the Council of Ministers on measures for the physical protection of nuclear materials (1993), Decision No. 34 of the Ministry for Emergency Situations on transport safety regulations governing the carriage of hazardous loads by rail transport, and Act No 1908-XII on state borders of the Republic of Belarus (1902).

Other legal instruments that postdated UNSCR 1540 are Act No 96-3 on the safety of genetic engineering (2006), Decision No 1049 of the Council of Ministers on the approval of the resolution governing the procedure for issuing licenses for the import, export or transit of opportunistic genetically engineered pathogens (2006), Decision No 46 of the Ministry for Emergency Situations on Regulations on a unified state system for accounting for and controlling sources of ionizing radiation (2006), Decision No. 461 on the import and export of chemicals subject to the control regime of the CWC (2006).

As far as Belarusian export import comport policy is concerned, Belarus is a party to the following non proliferation regimes: Nuclear Suppliers Group (NSG), Proliferation Security Initiative (PSI) and Zangger Committee (ZAC).

7. Belgium

The Kingdom of Belgium has submitted two national implementation reports to the UNSC 1540 *Ad hoc* Committee (on 26 October 2004 and 6 December 2005).

Belgium is a party to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT), as well as the Chemical Weapons Convention (CWC), and the Biological and Toxin Weapons Convention (BTWC). Belgium has ratified the Comprehensive Nuclear Test Ban Treaty (CTBT), the Convention on Physical Protection of Nuclear Material (CPPNM), the Geneva Protocols of 1925 and the Hague Code of Conduct (HCOC).

Related domestic regulatory measures are the Constitution of the Kingdom of Belgium, the Penal Code Act approving the Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on Their Destruction (10 July 1978), Act on terrorist offences (19 December 2003), Act on the prevention of the use of the financial system for the purpose of money-laundering (11 January 1993), The Act of 20 July 1978 (amended by the Act of 15 April 1994 establishing the Federal Agency for Nuclear Control and relating to protection against ionizing radiation), The Act of 5 August 1991 on the import, export, and transit of and on combating trafficking in arms, munitions and equipment (as amended in 2003), Act of 14 March 1975 (NPT ratification), Council Directive 94/55/EEC and 96/49/EEC, EURATOM Regulation No 302/2005 of 8 February 2005, Council Regulation (EEC) No. 2913/92 of 12 October 1992 (Community Customs Code), Customs and Excise Act of 18 July 1997, as well as Council regulation (EC) n. 428/2009 of 5 May 2009 setting up a Community regime for the control of exports, transfer, brokering and transit of dual-use items and etc.

According to Belgian penal legislation any person who stores, uses, transports, transfers those materials without due authorization is subject to criminal penalties (Penal Code, Art. 488b). The Belgian Act on Terrorist Offences (19 December, 2003) stipulates that the manufacture, possession, acquisition, transport or provision of nuclear or chemical weapons, the use of nuclear, biological or chemical weapons, and the research into and development of chemical weapons may also constitute a terrorist offense.

Belgium is an active member of multilateral export-control regimes, such as the Nuclear Suppliers Group (NSG), the Zangger Committee, the Missile Technology Control Regime (MTCR), and the Wassenaar Arrangement on Export Controls for Conventional Arms and Dual-Use Goods and Technologies (WA) and the Australia Group (AG).

8. Brazil

Brazil has submitted three full reports to the *Ad hoc* Committee on its national implementation of UNSCR 1540 obligations. First report was submitted on 29 October 2004, the others on 22 September 2005 and 17 March 2006 respectfully. International agreements to which Brazil is party have the same status as internal laws. Indeed, they are compulsory to State and non-State actors subject to national jurisdiction. Brazil's international non proliferation obligations are derived from Treaty of Tlatelolco (Treaty for the Prohibition of Nuclear Weapons in Latin America and the Caribbean), Comprehensive Test Ban Treaty (CTBT), Non-Proliferation Treaty (NPT), Convention on the Prohibition of the Development, Production, Stockpiling and Use of Chemical Weapons and on their Destruction, Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on Their Destruction (BWC), Hague Code of Conduct, and Convention on the Physical Protection of Nuclear Material.

Brazil has incorporated all guidelines related to control and protection of sensitive materials, equipment and technology that may be used for the production of WMDs stipulated by international treaties in question.

Three legal instruments are essential to regulating non proliferation related activities. Those are the Federal Constitution 1988, the National Security Act No. 7.170 (December; 1983) and Heinous Crimes Act No. 8.072 (1990). E.g. National Security Act defines and penalizes crimes against national security, the political and social order, including those of terrorism, sabotage and transfer,

storage and dissemination of military material.

Brazil has a number of by-laws and governmental regulations to deal with its 1540 obligations. Those include, but not limited to Decree No. 3.665 of November 20, 2000 (R-105) that determines the responsibility of the Brazilian Army in controlling products with destructive power or any other property that may pose a risk to natural and legal persons (arms, explosives, pyrotechnic materials, ammunition, parts and components). With regard to activities related specifically to the production, development and commercialization of materials and equipment that may be used in the fabrication of missiles, this control is exercised by the Army Command.

Relevant legislation as regards to means of delivery of WMD is contained in Decree No. 3.665 (2000, R-105). It establishes regulations for the adequate supervision of protection measures related to products under control (means of delivery, its parts and propellants).

Brazilian Act No. 6.453 (1977) establishes criminal responsibility for acts related to nuclear activities. It defines and penalizes the production, possession, supplying and use of nuclear material without necessary authorization, as well as export and import of nuclear material without due official license. In addition to this, Brazilian Act No. 9.112 of October 10, 1995 defines as sensitive goods all those goods with possible military applications; dual-use goods; and those that maybe used in nuclear, chemical and biological fields, as well as their means of delivery. It also establishes export controls on these goods and on services directly related to them.

One of the post UNSCR 1540 legal instruments is Act No. 11.254 (2005). It sets administrative and penal sanctions for activities prohibited by CWC. This legal instrument enables Brazil to fully comply with the CWC national implementation provisions.

Brazil is currently a member of Nuclear Suppliers Group (NSG) and Missile Technology Control Regime (MTCR).

9. Bulgaria

Bulgaria has submitted two national implementation reports on its 1540 obligations (on 18 November 2004 and 10 March 2006). Bulgaria reports to have developed and implemented a number of legislative measures related to the prevention of WMD proliferation.

Bulgaria is a member to the Treaty on Non-Proliferation of Nuclear Weapons (NPT 1970), Chemical Weapons Convention (1997) and Biological Weapons Convention (1975), Comprehensive Nuclear Test Ban Treaty (CTBT), Convention on Physical Protection of Nuclear Material (CPPNM), Hague Code of Conduct (HCOC), and has adopted an Additional Protocol to its IAEA Safeguards Agreement.

International instruments referenced above lay down non-proliferation commitments of Bulgaria. The latter treats obligations under its international agreements as part of its domestic legislation. According to the Bulgarian Constitution all international legally binding instruments which are duly ratified by the Parliament are part of the domestic legislation of the country. They have primacy over other acts of national law and supersede any domestic legislation which might be contradictory to their provisions.

The most relevant national legal framework includes the Penal Code (1968 as amended in 2005), Law on the Prohibition of the Chemical Weapons and Control over Toxic Chemicals and Their Precursors (adopted in 2000 and amended in 2007), the Law on Control of Foreign Trade Activity in Arms and Dual-Use Goods and Technologies (adopted in 1996 and amended in 2010) and the Regulation for its Implementation (adopted in 2002 and amended in April 2004), Law on Measures against Financing Terrorist Activities (2003), the Law on the Safe Use of Nuclear Energy (2002, as amended in 2007), Regulations for Securing the Physical Protection of Nuclear Material (2004), the Law on the Ministry of the Interior (1997), Law on Environmental Protection (2002, as amended in

2007) and the Law on Customs (1998, as amended in May 2004).

Bulgaria is a member of the following export control regimes: the Australia Group, Nuclear Suppliers Group, The Zangger Committee, the Wassenaar Arrangement, and Missile Technology Control Regime (since June 1, 2004). Following the UNSCR 1540, in May 2005 Bulgaria adhered to Proliferation Security Initiative (PSI).

10. Canada

Canada has submitted three reports to the 1540 *Ad hoc* Committee of UNSC. First report is dated 18 October 2004. The remaining two reports were filed on 19 January 2006 and 31 January 2008.

Canada is a party to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT), as well as the Chemical Weapons Convention (CWC), and the Biological and Toxin Weapons Convention (BTWC). Canada has also ratified the Comprehensive Nuclear Test Ban Treaty (CTBT), Convention on Physical Protection of Nuclear Material (CPPNM), and Hague Code of Conduct (HCOC). All international obligations are implemented fully into national law of Canada.

Canada is also a signatory to the Convention on the Safety of Spent Fuel Management and on the Safety of Radioactive Waste Management (the Joint Convention), and the Convention on Nuclear Safety (CNS).

Key domestic regulatory framework is comprised of Nuclear Safety and Control Act (1997, c. 9), CWC Implementation Act (1995, c. 25), BTWC Implementation Act (2004, c.15, Part 23, assented, but not yet in force), Criminal Code (R.S. 1985, c. C-46), Chemical Weapons Convention Implementation Act, Customs Act (1985 as amended 2009 to enhance the powers of customs officers), Export and Import Permits Act (1985 as amended 2006, sections 24-26), Transportation of Dangerous Goods Act (1992, c. 5, as amended in 2009), Consumer Chemical and Containers Regulations (2001), as well as Canadian Environmental Protection Act (1999). Some of the more recent post 1540 UNSCR regulations cover Human Pathogens and Toxins Act (2009), Controlled Products Regulations (2008), Canada Border Services Agency Act (2005) and Transshipment Regulations (C.R.C, c. 606, 2010).

The Nuclear Safety and Control Act (NSCA) is intended to regulate the use of nuclear energy and nuclear materials in Canada, including the implementation of relevant international measures to which Canada has agreed. Regulations made under the NSCA provide for the regulatory control and licensing of the production, use, storage and transport of nuclear materials, including their import and export.

Chemical Weapons Convention Implementation Act authorizes regulations regarding conditions for producing, using, acquiring or possessing a toxic chemical.

The Customs Act (R.S.1985, c.1) provides sections on enforcement and forfeitures that authorize the Canadian Border Security Agency to take enforcement and all necessary actions to prohibit the illicit trafficking in controlled goods.

The Export and Import Permits Act, R.S., c E - 17, was enacted by the Canadian Government to deal with the export of strategic and other goods. To this end, it satisfies the requirement for the establishment, development, review and the maintenance of appropriate effective national export and transshipment controls.

The Hazardous Products Act establishes an inspection regime. In addition, the Consumer Chemical and Containers Regulations (2001) it sets out requirements for the safe handling and storage of toxic chemicals.

The Transportation of Dangerous Goods Act (1992), and its associated regulations, sets out stringent requirements for the movement of, inter alia, flammable liquids, infectious substances, biological products.

Canada is a party to the following non proliferation regimes: Nuclear Suppliers Group (NSG), Australia Group (AG), Missile Technology Control Regime (MTCR), Zangger Committee (ZC), Wassenaar Arrangement (WA), Proliferation Security Initiative (PSI), Container Security Initiative (CSI), Global Initiative to Combat Nuclear Terrorism (GICNT) and G8 Director's Group on Non-Proliferation.

11. Cuba

Cuba has submitted two national implementation reports to 1540 *Ad hoc* Committee (on 28 October 2004 and 23 December 2005).

Cuba is a state party to Nuclear Non-Proliferation Treaty (NPT), Chemical Weapons Convention (CWC) and Biological Weapons Convention (BWC), Convention on Physical Protection of Nuclear Materials (CPPNM), International Atomic Energy Agency (IAEA), as well as Nuclear Weapon Free Zone Protocols and the Agency for the Prohibition of Nuclear Weapons in Latin America and the Caribbean (OPANAL).

In nuclear non proliferation field current domestic legislation of Cuba includes Decree-Law No. 207 on the use of nuclear energy (14 February 2000), Decree No. 208 on the State System of Accounting for and Control of Nuclear Material (24 May 1996), CITMA resolution No. 62/96 establishing rules for accounting and control of nuclear material (12 July 1996) and CITMA resolution No. 64/2000 entrusting the National Nuclear Safety Centre with the practical implementation of the State System of Accounting for and Control of Nuclear Material.

Decree-Law No. 207 of 14 February 2000 on the use of nuclear energy prohibits non-peaceful uses of any kind of nuclear material without proper authorization. Cuban Penal Code sets sanctions in form of imprisonment for those violations.

In biological field the primary legal instrument is the Decree-Law No. 190/1999 on biosafety, as well as No. 2/2004 on rules for accounting and control of biological material, equipment and related technology.

Similarly, Decree-Law No. 202/1999 on the prohibition of the development, production, stockpiling and use of chemical weapons and on their destruction prohibits individuals or legal entities in the national territory or under the jurisdiction of the Cuban State from engaging in the production, use, stockpiling or transport of toxic chemicals or their precursors, unless they are intended for purposes not prohibited by the Chemical Weapons Convention and provided that the types and quantities used are compatible with those purposes.

Additionally, existing legislative measures also include Cuban Penal Code (1987), Act No. 93 against acts of terrorism (December 2001), Act No. 59/87 containing the Civil Code, Act No. 7/77 on civil, administrative and labor proceedings, Decree-Law No. 2000/99 on environmental offences, Decree-Law No. 107/88 on the control of industrial explosives, ammunition and explosive or toxic chemicals, and Decree-Law No. 154/94 establishing rules for the control of industrial explosives, ammunition and explosive or toxic chemicals. Further down the list is CITMA Resolution No. 180/2007, CITMA (Ministry of Science, Technology and the Environment) Resolution No. 2/2004, Decree-Law No. 162/1996 (Customs Code), National Customs Service Resolution No. 19/2002 and etc.

Cuba is not a member of international export control regimes, such as Missile Technology Control Regime (MTCR), Nuclear Suppliers Group (NSG), Zangger Committee, the Australia Group, and the Wassenaar Arrangement.

12. Czech Republic

Czech Republic has submitted two national implementation reports to UNSC 1540 *Ad hoc* Committee (on 27 October 2004 and 23 January 2006).

Czech Republic is a party to the Nuclear Non-Proliferation Treaty (NPT); the Chemical Weapons Convention (CWC), the Biological and Toxin Weapons Convention (BTWC), the Comprehensive Nuclear Test Ban Treaty (CTBT), the Convention on Physical Protection of Nuclear Material (CPPNM), Hague Code of Conduct (HCOC) and Geneva Protocol of 1925.

Applicable national legislative measures referenced by Czech Republic include Act No. 281/2002 of 30 May 2002 on Some Measures related to Prohibition of Bacteriological (Biological) and Toxin Weapons and to amend Trades Licensing Act, Criminal Code (Act No. 140/1961), Act No. 19/1997 On Some Measures Concerning Chemical Weapons Prohibition (as amended in 2000), Act No. 185/2004 (amending the Customs Code), Act No. 18/1997 (Atomic Act as amended in 2002), Act No. 13/1993 (Customs Act), Act No. 185/2004 (concerning Customs Administration), Council regulation (EC) No. 428/2009 of 5 May 2009 setting up a Community regime for the control of exports, transfer, brokering and transit of dual-use items and etc.

Out of international control regimes, Czech Republic is a member of Nuclear Suppliers Group (NSG), Australia Group (AG), Missile Technology Control Regime (MTCR), Zangger Committee (ZC), Wassenaar Arrangement (WA) and Proliferation Security Initiative (PSI).

13. Denmark

Denmark filled its first national implementation report with the UNSC 1540 *Ad hoc* Committee on 27 October 2004. The second follow up report was submitted on 08 November 2005.

Denmark has ratified the Nuclear Non-Proliferation Treaty (NPT); the Chemical Weapons Convention (CWC); and the Biological and Toxin Weapons Convention (BTWC). Hungary has also adopted an Additional Protocol to its IAEA Safeguards Agreement. Denmark is a party to Comprehensive Nuclear Test Ban Treaty (CTBT), Convention on Physical Protection of Nuclear Material (CPPNM), Hague Code of Conduct (HCOC) and Geneva Protocol of 1925.

Relevant national legal measures to combat non-state WMD proliferation cover Danish Weapons Act, the Danish War Equipment Act, and the Danish Criminal Code, Radioactive Materials Act (1953), Act no. 443 of 14 June 1994 (about inspections, declarations and control according to the CWC), Chemical Substances and Products Act (Consolidated Act from the Ministry of Environment and Energy No. 21 of January 16, 1996), Radioactive Substances Act, n. 94(1953), Council Regulation No. 2913/1992 (Community Customs Code), Law no. 867 of 13 September 2005 (Customs Code), Council regulation (EC) No. 428/2009 of 5 May 2009 setting up a Community regime for the control of exports, transfer, brokering and transit of dual-use items and etc.

Following the UNSCR 1540 adoption Denmark passed Act No. 555 on 24 June 2005 to amend the Weapons Act. Denmark has introduced a new set of rules concerning arms brokering and technical assistance in relation to chemical, biological or nuclear weapons and missiles specifically elaborated or modified for the delivery of such weapons. Furthermore, rules on intangible transfer of software and technology regarding weapons have been introduced. These rules took effect on 1 July 2005.

Denmark is also an active member of the multilateral export control regimes: the Nuclear Suppliers' Group (NSG), the Zangger Committee (ZC), the Australia Group (AG), the Missile Technology Control Regime MTCR) and the Wassenaar Arrangement (WA), as well as Proliferation Security Initiative (PSI).

14. Estonia

UNSC 1540 *Ad hoc* Committee received Estonia's national implementation report on 29 October 2004.

Estonia is a party to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT), as well as the Chemical Weapons Convention (CWC), and the Biological and Toxin Weapons Convention (BTWC). Estonia has also ratified the Comprehensive Nuclear- Test-Ban Treaty (CTBT), Convention on

Physical Protection of Nuclear Material (CPPNM), and Hague Code of Conduct (HCOC).

Applicable domestic primary regulatory framework is comprised of Estonian Constitution (1992), Penal Code (2002), Strategic Goods Acts (2004), and Customs Act (2004). Strategic Goods Act (2004) prohibits the export and transit of weapons of mass destruction, any materials, hardware, software and technology used for the manufacture of weapons of mass destruction, and the export and transit of antipersonnel mines, and services related thereto regardless of their country of destination.

Related secondary legislation includes Statutes of Strategic Goods Commission Regulation No. 26 of the Government of the Republic of Estonia (2004), Customs Procedures related to Strategic Goods and Procedure of Intra-Community Transfers, Regulation No. 257 of the Government of the Republic of Estonia (July 2004), Environmental Monitoring Act (as amended in 2005), Chemicals Act (as amended in 2007), Environmental Impact Assessment and environmental management System Act, 2005 and Radiation Law (as amended in 2007).

Estonia is a member of the following export control regimes: Nuclear Suppliers Group (NSG), Australia Group (AG), and Wassenaar Agreement. Estonia is also a Proliferation Security Initiative (PSI) participating state.

15. Finland

Finland submitted its first report on national implementation of 1540 obligations to the *Ad hoc* Committee on 28 October 2004. The first report was further supplemented by additional reports on 05 December 2005 and 27 February 2006. Its latest report Finland filed on 20 April 2011.

Finland is a state party to key international non-proliferation arrangements: the Nuclear Non-Proliferation Treaty (NPT), the Chemical Weapons Convention (CWC), the Biological and Toxin Weapons Convention (BTWC) as well as the Comprehensive Test Ban Treaty (CTBT). Finland has also adopted an Additional Protocol to its IAEA Safeguards Agreement.

Finland has a wide range of legislative measures to prevent the proliferation of WMD, including by non-state actors. The key regulatory framework includes the Nuclear Weapons Act (203/1970), the Biological Weapons Act (257/1975), the Chemical Weapons Act (346/1997), the Nuclear Energy Act (990/1987), the Act on the Control of Exports of Dual-Use Goods (562/1996) and the Penal Code (33/1989), Customs Act (1466/1994) and their amendments [\[42\]](#). There have been a number of amendments to those laws to accommodate issues raised by UNSCR 1540.

Some recent regulations are the Government Decree on Security in the Use of Nuclear Energy (734/2008) issued in 2008, as well as Finland's accession to the International Convention for the Suppression of Acts of Nuclear Terrorism in 2009. In 2007 Finland also joined the Global Initiative to Combat Nuclear Terrorism.

Finland is also an active participant in all the export control regimes, including the Missile Technology Control Regime (MTCR), the Nuclear Suppliers Group (NSG), the Zangger Committee, the Australia Group (AG), and the Wassenaar Arrangement (WA). Finland is also a participant state to Proliferation Security Initiative (PSI).

16. France

France submitted two reports on measures she has taken to implement obligations set by UNSCR 1540. First report was submitted 28 October 2004 and the second one filled on 25 August 2005.

France is a party to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT), as well as the Chemical Weapons Convention (CWC), and the Biological and Toxin Weapons Convention (BTWC). France has ratified the Comprehensive Nuclear Test Ban Treaty (CTBT), the Convention on Physical Protection of Nuclear Material (CPPNM), the Nuclear Weapons Free Zone Protocols and the Hague

Code of Conduct (HCOC).

France has an extensive national legal framework in place to combat proliferation of WMD. Primary domestic regulations referenced by France in its national reports are French Penal Code (1994 as amended 2005), the Code of Public Health (as amended by Law 75-17), Law concerning the transportation by railway, road or inland navigation of dangerous or infected materials (5 February 1942), Council Regulation 2913/1992 (Community Customs Code), French Defense Code, French Customs Code, Labor Code, Environmental Code, Decree No. 98-36 of 16 January 1998, Council Regulation (EC) No 428/2009 setting up a Community regime for the control of exports, transfer, brokering and transit of dual-use items (5 May 2009) and etc.

France has adopted subject specific acts targeted towards non proliferation of biological, nuclear, chemical weapons. Act No. 72-467 prohibits the development, production, possession, stockpiling, acquisition and transfer of biological or toxin-based weapons prohibits the foregoing activities in connection with biological weapons or agents which might be used in their manufacture.

Further to 1540 UNSCR, France has repealed Act No. 80-572 of 25 July 1980 that was intended to prevent and, where necessary, detect without delay any disappearance, loss, theft or diversion of nuclear material in French territory. The revised provisions of the law in question have been incorporated into the Defense Code (articles L. 1333-1 to L. 1333-13).

France also used to rely on Act No. 98-467 of 17 June 1998 to fulfill its obligations under Chemical Weapons Convention. This was also repealed on 20 December 2004. The legal provisions in question have been also incorporated into the Defense Code (articles L. 2342-1 to L. 2342-84).

In France the physical protection of installations presenting a risk of proliferation is governed by Ordinance No. 58-1371 of 29 December 1958 on the strengthening of the protection of vitally important installations.

France is an active member of the various export control regimes for sensitive materials, equipment and technologies. Those are Wassenaar Arrangement (WA), Australia Group (AG), Zangger Committee (ZC), Nuclear Suppliers Group (NSG), Missile Technology Control Regime (MTCR), Proliferation Security Initiative (PSI), as well as Global Initiative to Combat Nuclear Terrorism.

17. Germany

The Federal Republic of Germany has submitted two national implementation reports to the 1540 *Ad hoc* Committee (on 6 October 2004 and 4 October 2005).

Germany reports to have a number of policies and national and international legal framework to combat WMD proliferation and their means of delivery by non-state actors. Germany is party to all relevant multilateral disarmament, arms control and non-proliferation treaties and conventions. Those are the Nuclear Non-Proliferation Treaty (NPT), the Chemical Weapons Convention (CWC), the Biological and Toxin Weapons Convention (BTWC), the Comprehensive Nuclear Test Ban Treaty (CTBT), Convention on Physical Protection of Nuclear Material (CPPNM) and Hague Code of Conduct (HCOC).

The basic regulations on manufacture transport and marketing of war weapons are contained in the War Weapons Control Act established in 1961 in response to art 26 of the German Constitution (Basic Law), where all actions to develop, transport or market war weapons are prohibited unless explicitly approved by the Federal Government.

The War Weapons Control Act (1961) provides for a comprehensive framework; the Foreign Trade and Payments Act (2009), the War Weapons Reporting Ordinance and the Implementation Act on the Convention on the Prohibition of Chemical Weapons as well as the Implementation Act on the Convention of 10 April 1972 on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons further complement the War Weapons Control Act

[43].

Other laws relevant for the prohibition of development, acquisition, production, possession, the transport, transfer or use of nuclear, chemical or biological weapons and their means of delivery are the Foreign Trade and Payments Ordinance of 18 December 1986, as well as the directly applicable Council regulation (EC) No. 428/2009 of 5 May 2009 setting up a Community regime for the control of exports, transfer, brokering and transit of dual-use items.

Germany is a state participant to Nuclear Suppliers Group (NSG), Missile Technology Control Regime (MTCR), Australia Group (AG), Zangger Committee (ZAC), Wassenaar Arrangement (WA) and Proliferation Security Initiative (PSI).

18. Hungary

Hungary submitted four reports on national implementation of 1540 obligations to the *Ad hoc* Committee (on 27 October 2004, 29 December 2005, 9 February 2006 and 21 January 2008 respectfully).

The Republic of Hungary is a party to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT), as well as the Chemical Weapons Convention (CWC), and the Biological and Toxin Weapons Convention (BTWC). Hungary has also adopted an Additional Protocol to its IAEA Safeguards Agreement. Hungary is a party to Comprehensive Nuclear Test Ban Treaty (CTBT), Convention on Physical Protection of Nuclear Material (CPPNM), Hague Code of Conduct (HCOC) and Geneva Protocol of 1925.

The Hungarian legal system treats international law as its domestic one. The generally accepted principles of international law such as for example the ones set out in Security Council Resolution 1540 (2004) form an integral part of Hungarian law, without any further formal incorporation.

The Republic of Hungary has a wide range of legislative measures to prevent the proliferation of WMD, including by non-state actors. Primarily, domestic legislative framework comprises of the Penal Code, Hungarian Constitution, Law-Decree 12/1970 on NPT, Government Decree 11/1975 on BTWC, Government Decree 104/1997 on CWC, Government Decree 16/2004 on the licensing of the export, import, transfer and transit of military equipment and technical assistance, Government Decree 50/2004 on the licensing of foreign trade in dual-use goods and technologies, Act on Customs and Finance Guard 2004 and Government Decree 263/2004 on the control of nuclear related dual use items, Government Decree No. 260/2006 on the Hungarian Trade Licensing Office, Act XXV of 2000 on Chemical Safety, Act XIX of 2004 on the Hungarian Customs and Finance Guard, Council regulation (EC) No. 428/2009 of 5 May 2009 setting up a Community regime for the control of exports, transfer, brokering and transit of dual-use items and etc.

Hungary is a member of the following export control regimes: Missile Technology Control Regime (MTCR), Nuclear Suppliers Group (NSG), Zangger Committee, the Australia Group, and the Wassenaar Arrangement. The export control regimes play an important role in agreeing control lists and raising international standards of export controls. Hungary is also a signatory to the Hague Code of Conduct on Ballistic Missiles. Hungary is also a participating member of the Proliferation Security Initiative (PSI).

19. Iceland

Iceland submitted two reports on measures taken to implement obligations set by UNSCR 1540. The first report was submitted on 28 October 2004 and the second one filled on 5 March 2008.

Iceland is a state party to the Nuclear Non-Proliferation Treaty (NPT), as well as the Chemical Weapons Convention (CWC), and the Biological and Toxin Weapons Convention (BTWC). Iceland has also ratified the Comprehensive Nuclear Test Ban Treaty (CTBT); the Convention for the Suppression of Acts of Nuclear Terrorism; the Council of Europe Convention on Laundering, Search, Seizure and Confiscation of the Proceeds from Crime and on the Financing of Terrorism; the Joint

Convention on the Safety of Spent Fuel Management and on the Safety of Radioactive Waste Management; the Convention on Assistance in the Case of a Nuclear Accident or Radiological Emergency; all twelve international conventions on terrorism, as well as the European Convention on the Suppression of Terrorism.

Iceland has a number of legislative and executive measures in place to prevent the proliferation of WMD, and regularly reviews these measures as necessary to keep them up to date and in line with international commitments. Primary domestic regulations referenced by Iceland in its national reports are Amendment no. 50/2003 to Act no. 87/1998 on Official Supervision of Financial Operation; Act on Measures Against Money-Laundering and Terrorist Financing No. 64/2006; and the Customs Act No. 88/2005.

In its 2008 report, Iceland noted that it was preparing new legislation on the enforcement of Security Council resolutions, terrorist financing and export controls. It was unclear from this study whether that information was ever passed.

Iceland is a member of the following export control regimes: Missile Technology Control Regime (MTCR) and the Australia Group (AG). Iceland is also participating in the following initiatives: Proliferation Security Initiative (PSI); the Global Threat Reduction Initiative; the Global Initiative to Combat Nuclear Terrorism; and the Financial Action Task Force.

20. India

India submitted three reports on measures taken to implement the obligations set by UNSCR 1540. The first report was submitted on 1 November 2004, the second on 16 January 2006 and the third on 8 February 2006.

India is a State Party to the Chemical Weapons Convention (CWC) and the Biological and Toxin Weapons Convention (CWC).

India has an array of administrative mechanisms to prohibit WMD access to non-State actors and terrorists. These include The Unlawful Activities (Prevention) Amendment Ordinance of 2004; The Atomic Energy Act of 1962; The Environment Protection Act of 1986; The Chemical Weapons Convention Act of 2000; The Customs Act of 1962; The Foreign Trade (Development & Regulations) Act of 1992; The Explosives Substances Act of 1908; The Arms Act of 1959 and The Arms Rules of 1962. India also has a List of Special Chemicals, Organisms, Materials, Equipment and Technologies (SCOMET), the export of which is either prohibited or permitted only under license.

In June 2005, India further strengthened its laws with the passage of the Weapons of Mass Destruction and Their Delivery Systems (Prohibition of Unlawful Activities) Act 2005 (WMD Act). The Act provides an integrated approach to the prohibition of unlawful activities related to WMDs, their delivery systems and related materials, equipment and technology. It also criminalizes these activities and grants India the authority to punish violations extraterritorially when the violator is Indian.

India is currently pursuing full membership in the four multilateral export control regimes, but to date its application has not been accepted.

21. Ireland

Ireland has submitted three reports on measures taken to implement the obligations set by UNSCR 1540. The first report was submitted on 28 October 2004, the second on 13 January 2006 and the third on 10 July 2010.

Ireland is a State Party to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT), as well as the Chemical Weapons Convention (CWC), and the Biological and Toxin Weapons Convention (BTWC). Ireland has also ratified the Additional Protocol to the IAEA Safeguards Agreement 1988

and enacted it in domestic law through the Containment of Nuclear Weapons Act 2003.

Ireland has a wide range of legislative measures in place to prevent the proliferation of WMD, including the: Control of Exports Act 1983; Control of Exports Order 2000; Importation of Pathogenic Agents Order 1997; the Firearms Acts of 1925 to 1990; the Chemical Weapons Act, 1997; the Radiological Protection Act 1991; and the Containment of Nuclear Weapons Act 2003. Customs-related issues are covered by the Customs Consolidation Act 1876; the Harbours Act 1946; the Customs Act 1956, the Customs, Inland Revenue and Savings Bank Act 1877; Reg. 14 of the European Communities Regulations 1992; and the Finance Act 1936. Moreover, the Irish Customs Service applies the provisions of Council Regulation No 2913/ 92 (Community Customs Code) and Commission Regulation No. 2454/93 (Implementing Provisions of the Community Customs Code) in respect of the import of goods from outside the European Union and export of goods to Third Countries.

As Ireland is a member of the European Union (EU), it also abides by EU regulations and participates in EU activities related to implementation of Resolution 1540.

Ireland is an active member of the following export control regimes: the Australia Group (AG), Missile Technology Control Regime (MTCR), the Nuclear Suppliers Group (NSG), the Wassenaar Arrangement (WA), and the Zangger Committee. It also subscribes to the Hague Code of Conduct on Ballistic Missiles.

22. Italy

Italy has submitted two reports on measures taken to implement the obligations set by UNSCR 1540. The first report was submitted on 27 October 2004 and the second on 5 December 2005.

Italy is a State party to the Treaty on Non-Proliferation of Nuclear Weapons (NPT); the Chemical Weapons Convention (CWC); and the Biological and Toxin Weapons Convention (BTWC). It has also ratified the Comprehensive Test Ban Treaty (CTBT), the Convention on the Physical Protection of Nuclear Materials (CPPNM) and the Additional Protocol to the IAEA Comprehensive Safeguards Agreement.

Italy has a number of legislative instruments in place to combat the proliferation of WMDs, their means of delivery and related materials. With respect to Biological Weapons, Italy has the following regulations: Law 9 July 1990 n. 185 (Article 1.7), which prohibits the manufacturing, import, export, and transit of biological weapons, and Law n. 497 of 14 October 1974 (Article 9, 10 & 12), which criminalizes violations of Law n. 185. Use of biological weapons is further criminalized under various provisions of the Italian Penal Code. With respect to Chemical Weapons, the following laws apply: Italian Law n. 496 dated November 18, 1995 (article 3); Italian Law n. 93 dated April 4, 1997 (article 2); Italian Law n. 496 dated November 18, 1995 (article 10); Italian Law n. 155 dated July 31, 2005 (article 8); and the Italian Penal Code. The regulation of nuclear WMDs and related material is also guided by Italian Law n. 497 dated October 14, 1974. Exports of all WMD-related material is governed by Italian Legislative Decree n. 96 dated April 9, 2003, which implements EC Regulation n. 1334/2000.

As a member of the European Union, Italy also abides by and supports EU initiatives aimed at combating the proliferation of WMDs, including the EU Strategy against proliferation and its Common Position, adopted in 2003.

Italy is a member of all export control regimes for dual-use goods and technology, including the Australia Group, the Missile Technology Control Regime, the Nuclear Suppliers Group, the Wassenaar Arrangement and the Zangger Committee.

23. Latvia

Latvia submitted two reports on measures taken to implement the obligations set by UNSCR 1540. The first report was submitted on 28 October 2004 and the second on 22 December 2005.

Latvia is a State Party to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT); the Convention on the Prohibition of Development, Production, Stockpiling and Use of Chemical Weapons and on Their Destruction (CWC); the Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on Their Destruction (BTWC); the Supplementary Protocol of Convention on the Prohibition of Use or Limitation of Certain Kinds of Weapons Regarded as Weapons of Mass Destruction or Nonselective Action; the Agreement with the International Atomic Energy Agency on the Application of Safeguards in connection with the Treaty on the Non-Proliferation of Nuclear Weapons; the Protocol Additional to the Agreement between Latvia and the IAEA for the Application of Safeguards; and the Comprehensive Nuclear Test Ban Treaty (CTBT).

Latvia's Criminal Law (April 1, 1999) penalizes support to non-State actors who attempt to develop, acquire, manufacture, possess, transport, transfer or use nuclear, chemical or biological weapons and their means of delivery. Nuclear, biological, and chemical offenses are covered specifically by Articles 73 and 88 of the Criminal Law, while the suppression of terrorism is covered under Article 89. In addition to the Criminal Law, the following laws relate to WMD proliferation: Law on Prevention of the Laundering of the Proceeds from Crime (June 20, 2002); the Law on Circulation of Strategic Goods (May 1, 2004); and the Act on Radiation Safety and Nuclear Safety (November 21, 2000).

As a member of the European Union (EU), Latvia also abides by EU regulations and participates in EU activities related to implementation of Resolution 1540.

Latvia is a participating member of the Nuclear Suppliers Group and Australia Group. It has submitted its membership application for the Wassenaar Arrangement and Missile Technology Control Regime, but has not yet been accepted.

24. Lithuania

Lithuania has submitted two reports on measures taken to implement the obligations set by UNSCR 1540. The first report was submitted on 27 October 2004 and the second on 21 September 2005.

Lithuania has acceded to all major international non-proliferation conventions and instruments, including: the 1925 Protocol for the Prohibition of the Use of Asphyxiating, Poisonous or Other Gases, and of Bacteriological Methods of Warfare; the Treaty on Non-Proliferation of Nuclear Weapons (NPT), the Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on their Destruction (BTWC); the Convention on the Prohibition of the Development, Production, Stockpiling and Use of Chemical Weapons and on their Destruction (CWC); the Comprehensive Nuclear Test Ban Treaty (CTBT); and the 2003 International Convention for the Suppression of Terrorist Bombings and the International Convention for the Suppression of the Financing of Terrorism.

Lithuania has the following pieces of domestic legislation in place to combat the spread of WMDs and related materials: The Law on the Export, Import and Transit Control of Strategic Goods; the Law on Economic and Other International Sanctions; the Law on Environmental Protection of 1992; the Law on Klaipeda National Port of 1996; the 1998 Law on the Prohibition of Chemical Weapons; the Law on Nuclear Energy of 1996; the Law on the Management of Radioactive Waste of 1999; the Law on Radiation Protection of 1999; the 1994 Governmental Resolution No. 938 on Approval of Regulations of Transportation of Dangerous and Military Goods of Foreign States Across the Territory of the Republic of Lithuania; and the Law on the State Border and the Protection Thereof of 2000. In response to 9/11, Lithuania passed the Law on the Prevention of Money Laundering of 25 November 2003. The Criminal Code of the Republic of Lithuania provides criminal liability for unlawful actions relating to WMDs or materials used for the production thereof.

As a member of the European Union (EU), Lithuania also abides by EU regulations and participates in EU activities related to implementation of Resolution 1540.

Lithuania is currently a member of the Nuclear Suppliers Group and the Australia Group. It has membership applications pending before the Missile Technology Control Regime (MTCR) and the Wassenaar Arrangement.

25. New Zealand

New Zealand has submitted two reports on measures taken to implement the obligations set by UNSCR 1540. The first report was submitted on 28 October 2004 and the second on 11 January 2006.

New Zealand is a party to the Biological Weapons Convention (BTWC), Chemical Weapons Convention (CWC), the Comprehensive Test Ban Treaty (CTBT), and the Nuclear Non-Proliferation Treaty (NPT).

New Zealand has legislation in place which gives effect to all of the major international treaties relating to WMDs, including: the New Zealand Nuclear Free Zone, Disarmament, and Arms Control Act 1987; the Chemical Weapons (Prohibition) Act 1996; New Zealand Crimes Act 1961; Section 72 of The Crimes Act 1961; Terrorism Suppression Act 2002; and the Radiation Protection Act 1965. New Zealand regulates the export of prohibited goods through the Strategic Goods List, which is implemented under the Customs and Excise Act 1996.

New Zealand is currently a member of all four export control regimes: the Nuclear Suppliers Group, the Australia Group, the Missile Technology Control Regime, and the Wassenaar Arrangement.

26. Norway

Norway has submitted two reports on measures taken to implement the obligations set by UNSCR 1540. The first report was submitted on 28 October 2004 and the second on 12 October 2005.

Norway is a party to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT), the Chemical Weapons Convention (CWC), the Biological and Toxin Weapons Convention (BTWC) and the Convention on the Physical Protection of Nuclear Material. Norway has also ratified the Comprehensive Test Ban Treaty (CTBT). The provisions of all these treaties have been incorporated into Norwegian law.

Norway has a wide range of legislation in place to prevent the proliferation of weapons of mass destruction. This includes the General Civil Penal Code (1902) (hereinafter referred to as the Penal Code), specifically Sections 1, 147, 152, and 153; Section 1 of the Act 6 May 1994 no. 10 relating to the implementation of the Chemical Weapons Convention; Section 5 of the Act 12 May 1972 no. 28 concerning Nuclear Energy Activities; and the Fire and Explosion Act. The Customs Act (1966) and customs regulations (1967) regulate the powers of the customs authorities and provide them with the legal authority to perform their duties at the border or in the customs control zone. In 2004, Norway amended its Export Control Act and its Export Control Regulations to provide legal authority for Norway to take action with respect to transfers that might facilitate acts of terrorism. Finally, transportation of such goods within Norway is subject to the European Agreement concerning the International Carriage of Dangerous Goods by Road (ADR) and Regulations concerning the International Carriage of Dangerous Goods by Rail (RID).

Norway is an active party to the following multilateral export control regimes: the Missile Technology Control Regime (MTCR), the Nuclear Suppliers Group (NSG), the Zangger Committee, the Australia Group, and the Wassenaar Arrangement.

27. Pakistan

Pakistan has submitted three reports on measures taken to implement the obligations set by UNSCR 1540. The first report was submitted on 27 October 2004, the second on 19 September 2005, and the third on 3 January 2008.

Pakistan is a State Party to the Chemical Weapons Convention (CWC) and the Biological Weapons Convention (BWC). Although it is not a member of the Nuclear Non-Proliferation Treaty (NPT), it is a member of the International Atomic Energy Agency (IAEA).

Pakistan's export controls framework consists of several individual pieces of legislation, including: The Import and Exports (Control) Act No. XXXIX of 1950; Pakistan's Nuclear Safety and Radiation Protection (PNSRP) Ordinance of 1984 and Regulation of 1990; the Chemical Weapons Convention Implementation Ordinance No. LIV of 2000; and the Nuclear Regulatory Authority Ordinance (PNRA) No. III of 2001.

In 2004, Pakistan strengthened controls on the export of sensitive technologies by passing the Export Control on Goods, Technologies, Material and Equipment Related to Nuclear and Biological Weapons and their Delivery Systems Act. Pursuant to this Act, in October 2005 it adopted national control lists which encompassed the lists and scope of export controls maintained by the Nuclear Suppliers Group, the Australia Group, the Missile Technology Control Regime and the European Union's Integrated List.

In May 2006, Pakistan also approved a Nuclear Security Action Plan aimed at strengthening the safety and security of nuclear materials, as well as preventing and responding to the illicit traffic of such materials. The National Command Authority Ordinance passed in 2007 provides enhanced support for the national strategic regime.

28. Romania

Romania has submitted two reports on measures taken to implement the obligations set by UNSCR 1540. The first report was submitted on 27 October 2004 and the second on 11 November 2005.

Romania is a State Party to the Nuclear Non-Proliferation Treaty (NPT), the Biological and Toxin Weapons Convention (BTWC) and the Chemical Weapons Convention (CWC). The Additional Protocol to the Safeguards Agreement between Romania and the IAEA has been in force since 7 January 2001. Romania is also a signatory to the International Code of Conduct against Ballistic Missile Proliferation (HCOC) and has ratified the Comprehensive Test Ban Treaty (CTBT).

Romania's export controls are primarily governed by Government Decision no. 594 enacted in 1992. Separate legislation has been enacted to implement each of the international treaties on non-proliferation, including the NPT, BTWC and CWC (Law No. 125/1994 and Law No. 56/1997, updated by Law No. 448/2003). The safe conduct of nuclear activities in Romania are regulated by Law no. 111/1996 as modified by Law 193/2003. In 2004, Romania passed Law 472/2004, which provides for specific measures to combat WMD proliferation by terrorists. Law 466/2002 already prohibits the use of the financial and banking system to finance terrorist activities and Law 656/2002 prohibits money laundering. The Romanian Penal Code of 1998 criminalizes breaches in export and trade regulations for strategic goods.

Romania, as a member of the EU, also abides by EU policies to prevent WMD proliferation, in particular the Action Plan agreed at the Thessaloniki European Council in June 2003 and the Strategy approved by the European Council in December 2003.

Romania participates in the following export control regimes: Wassenaar Arrangement, Nuclear Suppliers Group, Zangger Committee, and the Australia Group. Although it is not yet a party to the Missile Technology Control Regime (MTCR), Romania has fully complied with the MTCR Guidelines in order to limit the risks of proliferation of WMD's delivery means.

29. Singapore

Singapore has submitted two reports on measures taken to implement the obligations set by UNSCR 1540. The first report was submitted on 21 October 2004 and the second on 29 August 2005.

Singapore is a State Party to the following international non-proliferation treaties: the Non-Proliferation Treaty (NPT); the Biological and Toxin Weapons Convention (BTWC); the Chemical Weapons Convention (CWC); and the Comprehensive Test Ban Treaty (CTBT).

Singapore has enacted five key pieces of legislation aimed at countering the proliferation of WMD. The Strategic Goods Act, passed in January 2003, controls the transfer and brokering of strategic goods. As of 1 January 2008, the list of goods has been expanded to cover all items listed under the four multilateral export control regimes—the Australia Group, Wassenaar Arrangement, Nuclear Suppliers Group and the Missile Technology Control Regime.

The Regulation of Imports and Exports Act provides the overall framework for regulating general imports and exports in Singapore. The Chemical Weapons (Prohibition) Act gives effect to the Chemical Weapons Convention. The Arms Offences Act criminalizes unlawful possession of arms and ammunition. And, lastly, the Arms and Explosives Act regulates the manufacture, use, sale, transport, importation, exportation and possession of arms and explosives.

Singapore is not currently a member of any of the export control regimes.

30. South Africa

South Africa has submitted two reports on measures taken to implement the obligations set by UNSCR 1540. The first report was submitted on 31 January 2005 and the second on 3 January 2006.

South Africa is a State Party to the following international non-proliferation treaties and conventions: Chemical Weapons Convention (CWC); Biological and Toxin Weapons Convention (BTWC); the Nuclear Non-Proliferation Treaty (NPT); Treaty Banning Nuclear weapon Tests in the Atmosphere, Outer Space and Under Water; Treaty on the Prohibition of the Emplacement of Nuclear Weapons and other weapons of Mass Destruction on the Sea-Bed and the Ocean Floor and in the Subsoil Thereof; The African Nuclear Weapon-Free Zone Treaty (Treaty of Pelindaba); and the Comprehensive Nuclear-Test-Ban-Treaty (CTBT).

South Africa has put in place the following legislative framework to help stop the proliferation of WMDs and related technologies: Non Proliferation of Weapons of Mass Destruction Act 1993; Nuclear Energy Act 1999; National Conventional Arms Control Act 2002; Firearms Control Act 2000; The Protection of Constitutional Democracy Against Terrorist and Related Activities Bill; and the National Key Points Act 1980.

In addition to the acts mentioned above, South Africa also utilizes the following additional pieces of legislation to prevent, combat and eradicate the illicit trafficking of WMDS: International Co-operation in Criminal Matters Act 1996; Extradition Act 1962; Extradition Agreements and Mutual Legal Assistance Agreements.

South Africa is a member of the following export control regimes: the Zangger Committee, the Missile Technology Control Regime, and the Nuclear Suppliers Group. Although it is not a member of the Australia Group, South Africa has included the Australia Group items on its controlled items lists.

31. Sweden

Sweden has submitted two reports on measures taken to implement the obligations set by UNSCR 1540. The first report was submitted on 28 October 2004 and the second on 8 November 2005.

Sweden is a party to the 1925 Geneva Protocol, the Treaty on the Non-Proliferation of Nuclear Weapons (NPT), the Chemical Weapons Convention (CWC), the Biological and Toxin Weapons Convention (BTWC) and the Comprehensive Test Ban Treaty (CTBT). Sweden is a subscribing State

to the Hague Code of Conduct Against Ballistic Missile Proliferation (HCOC).

Obligations under the NPT, CWC, BTWC and CTBT are fully implemented in Swedish law. Specific acts include the Act on Criminal Responsibility for Terrorist Crimes (which grants Swedish courts universal jurisdiction); the Act on Criminal Responsibility for the Financing of Particularly Serious Crime; the Nuclear Activities Act and Ordinance on Nuclear Activities; the Radiation Protection Act and Radiation Protection Ordinance; the Military Equipment Act; the Act on Transport of Dangerous Goods; the Environmental Code; the Act on Flammables and Explosives; and the act on the Control of Dual-use Items and of Technical Assistance.

Several portions of the Swedish Penal Code also help regulate illicit trafficking in WMDs, including Chapter 23, Section 4 which criminalizes participation and assistance in committing a crime.

Sweden as a member of the EU takes active part in the implementation of the EU Strategy against proliferation of weapons of mass destruction, adopted by the European Council on 12 December 2003.

Sweden participates in the following export control regimes: The Zangger Committee, the Nuclear Suppliers Group, the Australia Group, the Wassenaar Arrangement, and the Missile Technology Control Regime.

32. Switzerland

Switzerland has submitted three reports on measures taken to implement the obligations set by UNSCR 1540. The first report was submitted on 22 October 2004, the second on 19 September 2005, and the third on 16 January 2008.

Switzerland is a State party to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT), the Chemical Weapons Convention (CWC) and the Biological and Toxin Weapons Convention (BTWC). Switzerland has also signed the additional protocol to its IAEA safeguards agreement is a party to the Convention on the Physical Protection of Nuclear Material of 3 March 1980.

Domestically, Article 7 of the Law on War Materials prohibits non-state actors from pursuing any activity related to WMD and their means of delivery as well as any attempts to engage in any such activities. The Customs Law and the Law on the Control of Dual Use Goods and Military Goods make it a criminal offense to export, import or transit goods that are otherwise controlled.

In 2003, Switzerland adopted amendments to the Criminal Code, the Code of Criminal Procedure and due diligence legislation, which made the financing of terrorism subject to criminal prosecution. This allowed Switzerland to fully implement the International Convention for the Suppression of the Financing of Terrorism, as well as the International Convention for the Suppression of Terrorist Bombings.

Switzerland is a party to the following export control regimes: the Nuclear Suppliers Group, the Zangger Committee, the Australia Group and the Missile Technology Control Regime.

33. Thailand

Thailand has submitted one report to the 1540 Committee. The report was submitted on 5 November 2004.

Thailand is a State party to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT), the Chemical Weapons Convention (CWC), the Biological and Toxin Weapons Convention (BTWC) and the Comprehensive Test Ban Treaty (CTBT). Thailand is also a member of the Southeast Asia Nuclear Weapons-Free Zone (SEANWFZ).

Thailand has several domestic legal instruments which help it comply with its obligations and commitments under Resolution 1540. These include: The Customs Act (1926); The Act Controlling

the Exportation of Arms, Armament and War Implements (1952); The Atomic Energy for Peace Act (1961); Ministerial Regulations, issued under the order of the National Administrative Reform Committee No. 37 (1976); The Export and Import Goods Act (1979); The Disease Control Act (1980); The Munitions of War Control Act (1987); The Royal Decree Controlling the Exportation of Arms, Armament and War Implements (1992); The Hazardous Substance Act (1992); The Amendment to the Anti-Money Laundering Act (1999); The Animal Disease Control Act (2001); and The Pathogens and Toxins Act (2001).

In August 2003, Thailand amended its Penal Code and Anti-Money Laundering Act to empower the Anti-Money Laundering Office to take effective counter-measures against any illegal financing of terrorist activities.

Thailand is not a member of an export control regime.

34. UAE

The United Arab Emirates has submitted one report to the 1540 Committee. The report was submitted on 9 December 2004.

The United Arab Emirates is a State Party to the Treaty on the Non-proliferation of Nuclear Weapons (NPT); the Chemical Weapons Convention (CWC); and the Convention on the Physical Protection of Nuclear Material.

The United Arab Emirates has the following relevant domestic laws: Federal Law No. 1 for 2004 on the regulation and monitoring of radioactive sources and protection against their dangers. It also has federal law on money-laundering and terrorist crimes. Regulatory principles are in place for the transportation and management of radioactive materials, while draft plans are currently being considered regarding the proliferation of chemical weapons and materials.

UAE is not a member of an export control regime.

35. United Kingdom

The United Kingdom has submitted three national implementation reports to the UNSC 1540 *Ad hoc* Committee (29 September 2004, 19 September 2005, and 14 December 2007).

The United Kingdom is a State Party to key international non-proliferation arrangements, such as the Nuclear Non-Proliferation Treaty (NPT), the Chemical Weapons Convention (CWC), the Biological and Toxin Weapons Convention (BTWC), as well as the Comprehensive Nuclear Test Ban Treaty (CTBT) and Convention on Physical Protection of Nuclear Material (CPPNM). The United Kingdom has also ratified Geneva Protocol of 1925, Hague Code of Conduct (HCOC) and is a party to Nuclear Free Zone Protocols. The UK has adopted an Additional Protocol to its IAEA Safeguards and it was enacted in UK law by Nuclear Safeguards Act (2000).

The United Kingdom has a wide range of legislative measures designed to prevent the proliferation of nuclear, chemical, and biological weapons, as well as their means of delivery, including by non-state actors. The centerpieces of this legislative framework are the Biological Weapons Act (1974), the Chemical Weapons Act (1996), the Anti-Terrorism, Crime and Security Act (2001 as amended in 2007), and the Export Control Act (2002) which entered into force on 1 May 2004, as well as the Carriage of Dangerous Goods and Use of Transportable Pressure Equipment Regulations 2009.

The Biological Weapons Act (1974) establishes the offence of possessing, developing or helping to develop, trafficking or brokering in biological weapons (including means of delivery designed to use such agents).

Similarly, the Chemical Weapons Act (1996) establishes the offence of using, possessing, developing or helping to develop, trafficking or brokering in chemical weapons (including means of

delivery designed to use such agents).

The Anti-terrorism, Crime and Security Act (2001) establishes the offence of using, possessing, developing or helping to develop, trafficking or brokering in nuclear weapons. It also establishes the offence of aiding, abetting, counseling or procuring a non-UK person overseas to commit a chemical, biological, or nuclear weapons offence.

Following the adoption of UNSCR 1540, the UK has introduced secondary legislation on the transfer of uranium enrichment technology. The Uranium Enrichment Technology (Prohibition on Disclosure) Regulations (11 August 2004) make it a serious offence to make unauthorized disclosures of uranium enrichment technology.

All of the offences referenced above are applicable to acts done outside the United Kingdom, provided they are done by a United Kingdom national or body incorporated under UK law.

The Customs and Excise Management Act (1979); European Community Customs Code (EC2913192); and Finance Act (1994) give Customs officers the power to require information in relation to goods imported or exported. Where there are grounds to believe that a declaration as to the ultimate destination of the goods is false, the goods may be detained and ultimately forfeited.

From export control regimes for sensitive materials the United Kingdom is a participating member to Nuclear Suppliers Group (NSG), Australia Group (AG), Missile Technology Control Regime (MTCR), Zangger Committee (ZC), Wassenaar Arrangement (WA) and Proliferation Security Initiative (PSI).

36. United States of America

The United States has submitted three reports on measures taken to implement the obligations set by UNSCR 1540. The first report was submitted on 12 October 2004, the second on 15 September 2005, and the third on 21 December 2007.

The United States is a State Party to the Chemical Weapons Convention (CWC), the Biological and Toxin Weapons Convention (BTWC), and the Nuclear Non-Proliferation Treaty (NPT).

United States law explicitly prohibits any person from knowingly constructing, possessing, exporting, importing, or using a nuclear weapon or radiological dispersal device (18 U.S.C. §§ 2332h, 832(c)). The possession of biological agents, toxins, or delivery systems is criminalized under 18 U.S.C. § 175. The Public Health Security and Bioterrorism Protection Act of 2002 and the Agricultural Bioterrorism Protection Act of 2002 authorize the strict regulation of the possession, use, and transfer of biological agents and toxins. With respect to chemical weapons, 18 U.S.C. § 229 prohibits the development, production, acquisition, transfer, stockpile or use of such weapons. Crimes involving the proliferation of biological, chemical, or nuclear weapons may also implicate the money laundering or forfeiture laws (see, e.g. 18 U.S.C. §§ 1956 and 1957).

The U.S. government requires licenses for the export of defense articles and defense services pursuant to the Arms Export Control Act (AECA), which prohibits the illicit transfer of U.S.-origin defense items to any unauthorized person. The U.S. government also requires licenses for the export and re-export of sensitive U.S.-origin dual-use items and nuclear-related items pursuant to the Export Administration Act of 1979 and the Export Administration Regulations.

A number of criminal statutes within the U.S. may provide the basis for prosecutions, including 18 U.S.C. § 1038, which allows for prosecution when a person knowingly conveys false information, which if reasonably believed, would constitute a terrorism offense.

The United States is a participating member of the following export control regimes: Nuclear Suppliers Group (NSG), Australia Group (AG), Missile Technology Control Regime (MTCR), Zangger Committee (ZC), Wassenaar Arrangement (WA) and Proliferation Security Initiative (PSI).

[11] A State has an "exclusive competence with regards to its territory" (Island of Palmas case, Award of 4 April 1928, United Nations Reports of International Arbitral Awards (RIAA), Vol II, p. 20). Thus, the jurisdiction of a state is primarily territorial. However, international law acknowledges other bases for states to apply their domestic law to persons, transactions, and activities outside their own territory. In the literature, it is widely accepted to call those bases either non-territorial jurisdiction or extraterritorial jurisdiction. For the purposes of this study the notion of extraterritorial jurisdiction would be used. It is understood to be any jurisdiction other than territorial jurisdiction.

[29] U.N. Member States' national reports, as well as the matrices constructed from these reports, can be found at the official website of the 1540 Committee, <http://www.un.org/sc/1540>.

[30] The 1540 matrix distinguishes between two types of extraterritorial jurisdiction: that which is part of the "national legal framework" and that which is "enforcement." According to paragraph 24 of the July 2008 report of the 1540 committee, this distinction was made in recognition of the fact that "the legal systems of many States prohibit or restrict activities through one type of law but use another type of law, such as a penal code, to set out specific penalties for violating such prohibitions or restrictions." During this study, we found significant confusion among member states in their use of these two categories. Thus, while we included them in the attached matrix, we did not distinguish between the two categories in our findings.

[31] The DRC was the only country that did not have an extraterritorial provision for chemical weapons. Its extraterritorial provisions applied only to nuclear weapons and material.
